Helm

Helm is the package
manager for Kubernetes

Three Big Concepts

❖   A Chart is a Helm package. It contains all of the resource definitions necessary to run an application, tool, or service inside of a Kubernetes cluster.

❖   A Repository is the place where charts can be collected and shared.

❖   A Release is an instance of a chart running in a Kubernetes cluster.

❖   One chart can often be installed many times into the same cluster.

❖   And each time it is installed, a new release is created.

Three Big Concepts

| HELM		DOCKER
Chart	------>	Image
Repository	------>	ECR
Release	------>	Container
